

REMOTE AUDIO/VIDEO CONFERENCING

Conferencing for collaborative work, round-tables, workshop... by remote video / audio leader solutions (Cisco, Polycom, Skype...) or dedicated private systems.

FREE

Public applications for professional use
(Skype, Google Hangouts, GoToMeeting...)

Simple to use, these solutions suit for communications with many users with no specific skills. Their limits : the duration, the number of participants, the communication privacy...

We can help you establish procedures to generalize and automate remote meetings with adequate standards (audio, video and light settings).

EMBEDDED

Professional systems and equipments
(Cisco WebEx, Polycom, Adobe Connect...)

Implemented in the company's conference rooms, these fixed systems have many benefits : sound and video HD quality, high capacities and wide range of functionalities.

Our dedicated technicians configure and exploit integrated professional softwares for all applications (events and meetings, e-training...).

PRIVATE

Dedicated installation
(using video and audio securized streaming)

Such a system is often used for events or sensitive private communications, requiring high level of quality and security. It can be done by satellite or by installing private datacom lines.

We are specialized in production of private remote conferencing, integrating interactivity, HD streams and security processes.

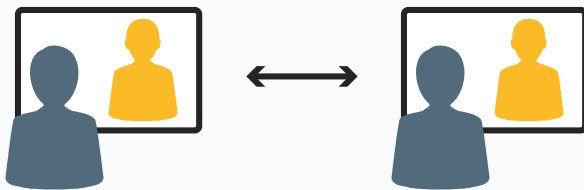

REMOTE AUDIO/VIDEO **CONFERRING**
